

# The Fume Cupboard Company

## Airflow 3 - Movex™ LEV Extraction arms

Equipped with Movex™ extraction technology. The Fume Cupboard Company is an authorized installer of Movex™ extraction arm systems, providing installation and maintenance services for both bench and ceiling mounted fume extraction arms.

The company sources a diverse range of Movex™ products to suit different working environments where hazardous dust and fumes are present. The extraction arms are designed to establish local extraction directly connected to the working process. This ensures that hazardous vapours and substances are removed as closely to the source as possible before they spread into the room.

### Fans and Controls

Movex Fans are designed to suit Local Exhaust Ventilation Systems in a variety of Industries, whilst our range of automation controls can be utilised for both separate and complete solutions.

### When do I need Local Extraction?

We would recommend local extraction systems where fumes are generated that are hazardous to health. We would also recommend local extraction at the working processes to aid expelling fumes, aerosols, and other hazardous odours.

### Encapsulation Cabinets.

In some instance it may be more effective to encapsulate Local Fume Extraction within a Cabinet stopping harmful pollution and preventing it from spreading into the air, in particular situations such Laboratory analysis equipment or grinding processes that create excessive amounts of dust.

### Airflow alarm.

An airflow alarm is mounted on the Extraction arm to monitor the airflow through each arm. The airflow alarm gives a visible and/or audible signal when the airflow gets below the needed level and becomes insufficient.
